

Okay so the missing values aren't caused by:

- Municipality repeatedly lacking data across multiple years
- A problem in our code affecting 1 municipality

Instead it appears 5 municipalities in the 2018 CBS dataset are missing average home value data, causing the un-affordability ratio to be missing for the 5 municipalities:

1. Asten
2. Bernheze
3. Laren
4. Sint Anthonis
5. Someren

We probably don't have to mention this in the report...

Removed 5 observations out of roughly (352 municipalities x 3 years =)

~1,056

So removing 5 observations = less than 0.5% of the data

If needed for some reason the explanation should be:

“Five municipalities (Asten, Bernheze, Laren, Sint Anthonis, and Someren) had missing average home value data in 2018, resulting in missing un-affordability ratios. These observations were excluded from the box-plot analysis.”
